

This powerful data feed provides seamless connectivity and unparalleled ease of use for developers, non-technical resources, and businesses alike.

The live Data Feed is built on our end-to-end data management platform that turns raw, complex data across varied sources into consolidated analysis ready datasets. The end-to-end data management platform automates typically time consuming and complex ETL processes to effortlessly map and transform data behind the scenes. The result is a singular dataset that is ready for insightful analytics.

And with the live Data Feed, this real-time dataset is available at your fingertips and can be quickly and easily integrated into your existing data analytics tools such as Excel, Power BI or other BI tools, or internal data warehouses.

Key Features and Benefits

Seamless Integration with Existing Reporting Tools

Don't spend time learning new reporting tools. Seamlessly integrate insights ready datasets into existing analytics tools such as Excel, Power BI, Tableau and more, so you can preserve your current workflows and maximize efficiency.

No Technical Expertise Required

Our live Data Feed is engineered with simplicity in mind. Implementation is a breeze and businesses can integrate the live Data Feed into their systems in minutes without the need for technical resources.

Interoperability

The API adheres to industry standards, ensuring interoperability with a wide range of systems and applications.

Scalability

Built with scalability in mind, our live Data Feed is capable of handling large amounts of data, ensuring optimal performance as you integrate additional data sets and as your business grows.

Security

BUCS is SOC 2 compliant, so your data is always managed securely. The live Data Feed is equipped with advanced security features, including encryption and authentication protocols, to safeguard your data throughout the integration process.

Real-Time Updates

Always be ready for month-end close or whenever important business questions arise. Our live Data Feed enables seamless, real-time updates to ensure your applications are synchronized with the latest reporting and insights data.

Comprehensive Support

Our support team is available to assist you with any inquiries or challenges you may encounter during implementation.

Real Client Scenario and Impact

Situation: A large accounting and consulting firm was manually managing Excel datasets, which powered an AI-driven predictive 13-week cash flow model.

Challenge: The data compiled in Excel was coming from different applications and each data set was formatted differently so a team member had to manually transform and consolidate the data into a clean Excel dataset for the model. The process was time consuming, and the team struggled to get an updated and clean dataset into the model each week.

Action: BUCS connected to the data sources directly, created a single, transformed dataset, and provided it through a live Data Feed to update the Excel model easily with Excel's built in connection.

Result: The client saved five labor hours per week through automating their 13-week cash flow model eliminating manual data cleansing and consolidation.

Real Client Scenario and Impact

Situation: A services company with multiple entities needed to prepare consolidated financial statements twice a month in Excel.

Challenge: The company needed to collect trial balances across eight entities located in different time zones and convert them to a single chart of accounts. The process was highly repetitive, time-consuming and error prone.

Action: BUCS connected to the data sources directly, mapped each entity's chart of accounts into a single chart of accounts, created a single, transformed dataset, and provided it through a live Data Feed to update the client's Excel financial statements.

Result: The client saved eight labor hours per month and key deliverables were on-time and accurate, which built trust with key stakeholders.

Availability

The live Data Feed ensures you have access to your data, wherever you need it most and is available now for integration. To learn more about how this solution can elevate your integration capabilities, contact our team today.

BUCS launched the first version of our platform in 2016 to help mid-market companies improve performance through better information. This idea has blossomed into an end-to-end data management platform used by high-growth organizations, private equity firms, and top professional service firms. They rely on our platform to drive efficiency and increase decision velocity, resulting in value creation greater than 5% of revenue.
