

A simple 3-step data connection process is the beginning of a client's consolidated reporting journey.

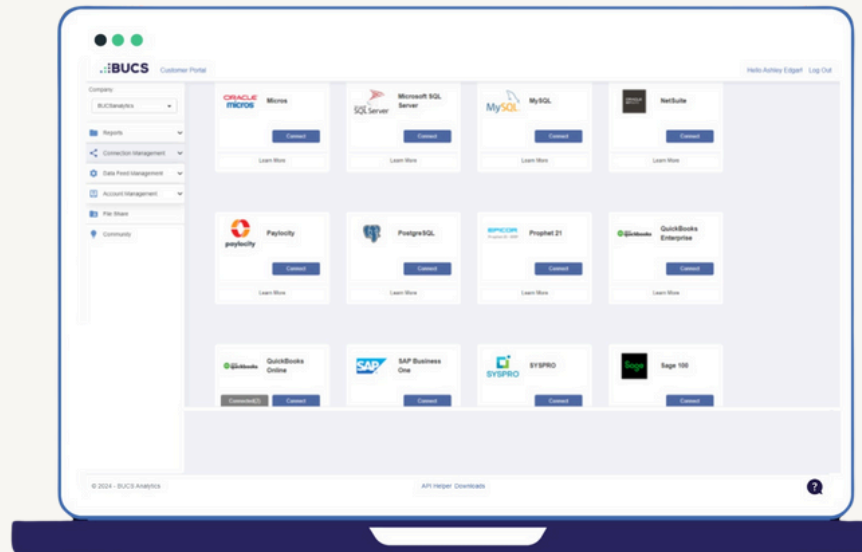

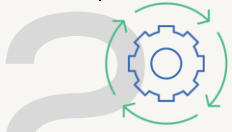

## 1 Connect Data

With a few clicks, clients can set up their data connections by using step-by-step connectors available in our Connection Hub. These connectors ensure seamless, secure, always-on data connections are established so your business's data always remains protected in our data management platform.

There are two types of connections:

- On Prem – Client installs our remote agent to talk to the private on-prem data source then finishes integration setup through the Connection Hub.
- Cloud – Client grants BUCS access to the cloud application through the Connection Hub wizard.

## Automate Transformations

Say goodbye to manual mapping and welcome to the power of automation! Our end-to-end data management platform automates these typically time consuming and complex ETL processes to effortlessly map and transform data behind the scenes. Through our data management platform, data tables from disparate data sources are ingested and the schema is normalized into a consistent and easy to use data structure.

Rest assured these transformations are based on BUCS's industry expertise and numerous years of fine-tuning datasets to yield the most actionable data.

## Finalize Integrations

Finalize your integration with the click of a button. Your data is now securely transferred to our data management platform on an ongoing basis. We'll work with you to identify the refresh frequency that makes sense based on the data source. For example, GL data might make sense to refresh a few times a day while payroll data might make sense to refresh weekly or monthly. Your data connection is continuously monitored to ensure you are working with the most up-to-date dataset. If for any reason the connection is disrupted, you are notified so you can re-establish the connection immediately.

## Result

With our Connection Hub, you can maximize the value of your data by integrating additional data sources including accounting, finance, operations, payroll, sales, POS and more.

BUCS always-on data connections and intuitive transformed data structures help clients solve challenges with siloed data and the repetitive, error-prone processes to consolidate it. Say goodbye to hours of manual Excel data manipulation and stale information that doesn't inform decision making.

Once the 3-step process is completed, clients define how they want to present and distribute data to key stakeholders within their business.

Consolidated reporting makes managing the business and making informed decisions easy.

BUCS launched the first version of our platform in 2016 to help mid-market companies improve performance through better information. This idea has blossomed into an end-to-end data management platform used by high-growth organizations, private equity firms, and top professional service firms. They rely on our platform to drive efficiency and increase decision velocity, resulting in value creation greater than 5% of revenue.
