

Situation

Motherlode Co-Packing is a privately owned co-packing business that specializes in producing and packaging food products, primarily sauces and condiments.

Challenge

Motherlode successfully implemented a large ERP with robust data capture, but the ERP's reporting solutions did not provide insight into certain inventory considerations important to the food & beverage industry.

Management had difficulty tracking upcoming expiration dates of individual batches of raw food products, as well as rightsizing order size of raw materials, leading to frequent inventory adjustments.

Action

Connected to ERP data and ran through BUCS end-to-end data management platform.

Analyzed frequency and size of inventory adjustments by item over time to monitor dollar impact of current inventory management processes and to better size manufacturing orders.

Provided analysis that notifies management of upcoming expirations of inventory items.

Result

18% Reduction

in inventory adjustments to Finished Good SKUs due to successful monitoring of expiration dates and a reduction in waste

"BUCS helped us get visibility into previously hard to access data, leading to a better picture of our inventory situation. As a result, we were able to better time new orders, reduce waste and reduce the amount of inventory adjustments we were having to make."

Greg Dennis
COO

System Integrated

BUCS launched the first version of our platform in 2016 to help mid-market companies improve performance through better information. This idea has blossomed into an end-to-end data management platform used by high-growth organizations, private equity firms, and top professional service firms. They rely on our platform to drive efficiency and increase decision velocity, resulting in value creation greater than 5% of revenue.
