

BUCSanalytics for transactions

Comprehensive financial due diligence, data-driven insights and intuitive portfolio management.

M&A due diligence requires data input from many sources. It's a challenge to inspect information from multiple software platforms and third-party vendors, leading to inefficient processes, long wait times, high costs and uncertainty. Additional BI tools that provide inaccurate or incomplete data analytics and actionable insights extend the burden well beyond deal closing.

BUCSanalytics empowers you to gain true insights to maximize your investment value while allowing your team to focus on critical decisions and deal sourcing rather than assembling and preparing data.

Leverage data to see the full picture, before and after every deal.

BUCSanalytics' cloud-based platform leverages data to accelerate the M&A process from initial, pre-deal due diligence to post-deal, decision guidance, monitoring and execution.

Pre-deal benefits:

Rapid due diligence and cost savings

Expedite your due diligence processes by eliminating manual spreadsheet-driven analysis and human error.

In-depth risk and opportunity analysis

Discover, quantify and plan for potential present or future risks and opportunities across any business dimension.

Strategic profitable growth planning

Develop an actionable strategy to capitalize on cash generating opportunities to maximize value upon deal closing.

Post-deal benefits:

Monitoring and tracking

Discover and track improvement opportunities in customer management, sales, working capital and capital expenditures.

Full picture transparency

View analysis and visualizations of key financial and operational performance metrics across multiple business processes and data sources.

Easy, ongoing reporting

Quickly compile and deliver critical information for key decision makers, managers and investors in an intuitive format.

ACQUIRE with speed and confidence

The BUCSanalytics platform connects to key data sources to evaluate deals faster and streamline your business intelligence.

System agnostic solution

BUCS features out-of-the-box integration with leading ERP and accounting systems. The solution also expands to leverage CRM, operational, project, payroll and other systems data.

Key features and functionality

- Drill down to individual transaction level
- Explore data in visual and tabular views
- Create custom analysis as needed
- Access your cloud-based insights anywhere
- Update data and analysis as needed

From beginning to end and beyond, BUCSanalytics streamlines any transaction.

Proven results from data-driven decisions

45%

sales increase

.....
Improved customer satisfaction with timely and complete service driving quantifiable increase in sales activity.

\$300k

software investment savings

.....
Provided greater visibility and integration of current system data rendering an investment in a new MRP system unnecessary.

32%

inventory reduction

.....
Conducted working capital analysis driving greater inter-connected visibility across the supply chain resulting in more efficient inventory utilization.
